

## Task: The Intake Triage Agent

### Scenario Brief:

*A professional services firm receives 40–60 inbound enquiries per week via a web form. Each enquiry includes a short free-text description of what the client needs, their industry, company size, and urgency. Today, a junior analyst reads every submission, tags it by service line, estimates complexity (simple / moderate / complex), and routes it to the right team lead. This takes roughly 8 hours per week and is error-prone.*

*Your job: design and prototype an automated triage system that classifies, enriches, and routes these enquiries — replacing the manual step.*

**Deliverables:** A functioning prototype of the core classification/routing logic — the most basic version that covers the vital functionality. Notebook, small app, orchestration workflow — whatever you'd actually reach for. Use synthetic data. **Supplementary (optional) evidence to strengthen your case:**

1. **Architecture document** (1–2 pages or a diagram + notes): How would you build this end-to-end? Cover data flow, model/API choices, integration points, and what you'd instrument from day one.
2. **Brief write-up** (half a page): What would break first in production? What would you monitor? What's your fallback when the model gets it wrong?

### Instructions:

We'd like you to spend 2–3 hours on the attached task before our next conversation. A few things to know:

- Use whatever tools you'd normally use, including AI assistants, copilots, and code generators. We're an AI company — we'd be surprised if you didn't. We're interested in your judgement, not whether you can write boilerplate from memory.
- Pick the deliverables that best showcase your strengths. You don't have to do all three — though you're welcome to if time allows.
- Depth over breadth. We'd rather see one thing done thoughtfully than everything done thinly.
- Come ready to discuss. The deliverable is a starting point for a 30–45 minute technical conversation where we'll dig into your thinking, trade-offs, and what you'd do differently with more time.
- Please submit the assignment no later than **24-hours before** the panel interview.
